

Welcome to your CDP Climate Change Questionnaire 2023

C0. Introduction

C0.1

(C0.1) Give a general description and introduction to your organization.

Celebrating its 56th anniversary this year in the Turkish automotive industry, Karsan has been manufacturing at its modern facilities its own vehicles, as well as parts for the world's prominent brands in the commercial vehicles sector. The company has been engaged in commercial vehicle production since 1966, and its factory in Hasanağa in Bursa has the capacity to manufacture up to 19,870 vehicles a year on a single shift. The Hasanağa factory is a flexible installation that can manufacture all kinds of vehicles in the same facilities from passenger cars and heavy trucks to minivans and buses. It is located 30 km from the Bursa city center and has been established on an area of 200,000 sqm, 90,000 sqm of which is closed space.

Karsan has been the only independent multi-brand light commercial vehicles manufacturer in Turkey for more than 50 years and the next phase for the company, powered and enabled by its business partners and licensors, is to develop bespoke versions of new and existing vehicles in order to extend its presence to all segments of cargo and passenger transportation. Working to "develop innovative products and services from the idea to the market" and to cater to every market segment, Karsan primarily aims to strengthen its Main Manufacturer/OEM business line. Karsan manages its whole automotive value chain from R&D and manufacturing to marketing, sales, and after-sales activities.

Karsan produces eco-friendly Jest and Atak models under its own brand. Karsan achieved a series of consecutive launches, introducing the e-JEST in 2018, e-ATAK in 2019, Autonomous e-ATAK in 2021, as well as the 10m, 12m, and 18m models of the Karsan e-ATA family in the same year. In 2022, Karsan further expanded its electric product range with the launch of the e-ATA HYDROGEN. This remarkable accomplishment established Karsan as the first and only company in Europe to offer a fully electric product lineup ranging from 6 meters to 18 meters in length. Karsan, which also produces 10-12-18 meter buses for Menaribus also produces Megane Sedan cars for the Renault brand as of 2022. In addition to vehicle production, Karsan also provides industrial services in its factory located in the Organized Industrial Zone.

C0.2

(C0.2) State the start and end date of the year for which you are reporting data and indicate whether you will be providing emissions data for past reporting years.

Reporting year

Start date

January 1, 2022

End date

December 31, 2022

Indicate if you are providing emissions data for past reporting years

Yes

Select the number of past reporting years you will be providing Scope 1 emissions data for

3 years

Select the number of past reporting years you will be providing Scope 2 emissions data for

3 years

Select the number of past reporting years you will be providing Scope 3 emissions data for

2 years

C0.3

(C0.3) Select the countries/areas in which you operate.

Turkey

C0.4

(C0.4) Select the currency used for all financial information disclosed throughout your response.

TRY

C0.5

(C0.5) Select the option that describes the reporting boundary for which climate-related impacts on your business are being reported. Note that this option should align with your chosen approach for consolidating your GHG inventory.

Operational control

C-T00.7/C-TS0.7

(C-T00.7/C-TS0.7) For which transport modes will you be providing data?

Light Duty Vehicles (LDV)

Heavy Duty Vehicles (HDV)

C0.8

(C0.8) Does your organization have an ISIN code or another unique identifier (e.g., Ticker, CUSIP, etc.)?

Indicate whether you are able to provide a unique identifier for your organization	Provide your unique identifier
No	

C1. Governance

C1.1

(C1.1) Is there board-level oversight of climate-related issues within your organization?

Yes

C1.1a

(C1.1a) Identify the position(s) (do not include any names) of the individual(s) on the board with responsibility for climate-related issues.

Position of individual or committee	Responsibilities for climate-related issues
Board-level committee	Karsan Board of Directors is responsible for sustainability management on a strategic scale, as in all matters related to the company. Operating under the Board of Directors, the Corporate Governance Committee is officially responsible for supervision of the compliance with the sustainability principles on both policy and practice level which are included in the Capital Market Board (CMB) regulations, overseeing compliance issues and making recommendations to the Board of Directors to improve company's sustainability priorities and program. Since climate change and environment, smart and green mobility aspects are officially defined as company's sustainability priorities which have direct impact on climate-related performance including CO2 emissions arising from operations, impacts of fuel vehicles on the climate as well as positive contributions autonomous electrical vehicles, climate-related issues are direct responsibility of the Corporate Governance Committee.
Chief Executive Officer (CEO)	Transforming the strategic orientations drawn by the Board of Directors into operations is the responsibility of all business units under the leadership of the CEO. This also applies to climate-related issues. The CEO also chairs Sustainability Committee which is senior level executive body responsible for sustainability issues including the climate changed. As the most senior responsible for the corporate performance, CEO is also engaged in climate related performance areas such as energy use, CO2 emissions, legal compliance, climate

	friendly vehicle R&D studies. For instance, manufacturing electric vehicles is a top priority in terms of corporate strategy. Thus, adopting holistic climate strategy and developing climate performance are among the top CEO priorities. Company objectives such as manufacturing electric vehicles increasing their share, increasing productivity through energy efficiency, material efficiency, water management, diversification of electric vehicle product range are found in the CEO's scorecard.
--	--

C1.1b

(C1.1b) Provide further details on the board's oversight of climate-related issues.

Frequency with which climate-related issues are a scheduled agenda item	Governance mechanisms into which climate-related issues are integrated	Please explain
Scheduled – all meetings	<ul style="list-style-type: none"> Reviewing innovation/R&D priorities Reviewing and guiding strategy Monitoring the implementation of a transition plan Monitoring progress towards corporate targets Overseeing and guiding public policy engagement 	Board of Directors meets in monthly basis. Sustainability issues including the climate risks are discussed in the Board agenda in various intervals depending on the aspect. Climate related aspects including energy, material, water consumption are discussed in an aggregated manner in all meetings as they are part of the cost structure; all Electric Vehicle projects, R&D activities and progress against objectives, mega trends, risks, opportunities and forward-looking aspects such as possible regulations regarding electric vehicles, carbon taxes, green financial instruments are discussed in all Board meetings..
Scheduled – some meetings	<ul style="list-style-type: none"> Reviewing and guiding the risk management process Other, please specify <ul style="list-style-type: none"> Reviewing compliance against climate related regulations. Reviewing climate related annual public disclosures and sustainability report. 	Some of the aspects are discussed by the Board in a scheduled time frame but not in all meetings. These aspects are mostly time specific. For instance, compliance studies regarding Sustainability Principles Framework of the Capital Markets Board are conducted once a year. In the Spring meetings Board discusses level of compliance to the Sustainability Principles Framework which also contains climate related principles from policy to practice. Karsan publishes its annual sustainability report yearly, generally in the 3rd Quarter. Thus, Corporate Governance Committee of the Board reviews the report to be published in its meeting. Early Detection of Risk Committee of the Board discusses climate and environment related risks

		(including product risks) in their meetings once a year.
--	--	--

C1.1d

(C1.1d) Does your organization have at least one board member with competence on climate-related issues?

Board member(s) have competence on climate-related issues	
Row 1	Not assessed

C1.2

(C1.2) Provide the highest management-level position(s) or committee(s) with responsibility for climate-related issues.

Position or committee

Chief Executive Officer (CEO)

Climate-related responsibilities of this position

Managing major capital and/or operational expenditures related to low-carbon products or services (including R&D)
 Managing climate-related acquisitions, mergers, and divestitures

C1.3

(C1.3) Do you provide incentives for the management of climate-related issues, including the attainment of targets?

	Provide incentives for the management of climate-related issues	Comment
Row 1	Yes	We provide both monetary and non-monetary incentives to both managers and all employees for their initiatives which support

		the company's progress in terms of in managing climate-related risks and opportunities.
--	--	---

C1.3a

(C1.3a) Provide further details on the incentives provided for the management of climate-related issues (do not include the names of individuals).

Entitled to incentive

Chief Executive Officer (CEO)

Type of incentive

Monetary reward

Incentive(s)

Other, please specify

Internal company award, internal team of the month recognition

Performance indicator(s)

Achievement of climate transition plan KPI

Incentive plan(s) this incentive is linked to

Both Short-Term and Long-Term Incentive Plan

Further details of incentive(s)

Explain how this incentive contributes to the implementation of your organization's climate commitments and/or climate transition plan

Targets regarding reduction of energy use, increasing efficiency and reduction climate-related impact of vehicles such as GHG emissions, fuel consumption, electrification and increasing market share of electric vehicles are found in the scorecard of the CEO. Performance against these targets result in monetary incentive.

Entitled to incentive

Chief Operating Officer (COO)

Type of incentive

Monetary reward

Incentive(s)

Other, please specify

Internal company award, internal team of the month recognition

Performance indicator(s)

Achievement of climate transition plan KPI

Incentive plan(s) this incentive is linked to

Both Short-Term and Long-Term Incentive Plan

Further details of incentive(s)

Explain how this incentive contributes to the implementation of your organization's climate commitments and/or climate transition plan

Targets regarding reduction of energy use, increasing efficiency are found in the score card of the COO. Performance against these targets result in monetary incentive.

Entitled to incentive

Other C-Suite Officer

Type of incentive

Monetary reward

Incentive(s)

Other, please specify

Internal company award, internal team of the month recognition

Performance indicator(s)

Achievement of climate transition plan KPI

Incentive plan(s) this incentive is linked to

Both Short-Term and Long-Term Incentive Plan

Further details of incentive(s)

Explain how this incentive contributes to the implementation of your organization's climate commitments and/or climate transition plan

Targets regarding increasing market share of electric vehicles are found in the scorecard of the all C-suite executive. Performance against these targets result in monetary incentive.

Entitled to incentive

Facilities manager

Type of incentive

Monetary reward

Incentive(s)

Other, please specify

Internal company award, internal team of the month recognition

Performance indicator(s)

Achievement of climate transition plan KPI

Incentive plan(s) this incentive is linked to

Both Short-Term and Long-Term Incentive Plan

Further details of incentive(s)

Explain how this incentive contributes to the implementation of your organization's climate commitments and/or climate transition plan

In line with World Class Manufacturing - Energy, Cost Deployment and Environment Pillar activities and scoring system, energy efficiency and consequent GHG emission reduction targets and projects are found in the personal scorecard of facilities manager. Performance against these targets result in monetary incentive.

Entitled to incentive

Other, please specify

Environment, Health and Safety Administrator

Type of incentive

Monetary reward

Incentive(s)

Other, please specify

Internal company award, internal team of the month recognition

Performance indicator(s)

Achievement of climate transition plan KPI

Energy efficiency improvement

Increased share of low-carbon energy in total energy consumption

Reduction in total energy consumption

Increased supplier compliance with a climate-related requirement

Increased value chain visibility (traceability, mapping, transparency)

Company performance against a climate-related sustainability index (e.g., DJSI, CDP Climate Change score etc.)

Incentive plan(s) this incentive is linked to

Both Short-Term and Long-Term Incentive Plan

Further details of incentive(s)

Explain how this incentive contributes to the implementation of your organization's climate commitments and/or climate transition plan

In line with World Class Manufacturing - Energy, Cost Deployment and Environment Pillar activities and scoring system, energy efficiency and consequent GHG emission reduction targets and projects are found in the personal scorecard of Environment,

Health and Safety Administrator and our team member. Performance against these targets result in monetary incentive.

Entitled to incentive

All employees

Type of incentive

Monetary reward

Incentive(s)

Other, please specify

Internal company award, internal team of the month recognition

Performance indicator(s)

Achievement of climate transition plan KPI

Incentive plan(s) this incentive is linked to

Short-Term Incentive Plan

Further details of incentive(s)

Explain how this incentive contributes to the implementation of your organization's climate commitments and/or climate transition plan

All employees can submit their suggestions and improvement actions (Kaizen) related with energy efficiency and GHG reduction within Karsan Suggestion/Kaizen System. Each positive suggestion and all best Kaizens are rewarded separately with monetary incentives.

Entitled to incentive

All employees

Type of incentive

Non-monetary reward

Incentive(s)

Internal company award

Internal team/employee of the month/quarter/year recognition

Performance indicator(s)

Achievement of climate transition plan KPI

Incentive plan(s) this incentive is linked to

Both Short-Term and Long-Term Incentive Plan

Further details of incentive(s)

Explain how this incentive contributes to the implementation of your organization’s climate commitments and/or climate transition plan

All employees can submit their suggestions and improvement actions (Kaizen) related with energy efficiency and GHG reduction within Karsan Suggestion/Kaizen System. All best Kaizens are rewarded with non-monetary incentives such as recognition in monthly corporate magazine, personal appreciation of senior management.

C2. Risks and opportunities

C2.1

(C2.1) Does your organization have a process for identifying, assessing, and responding to climate-related risks and opportunities?

Yes

C2.1a

(C2.1a) How does your organization define short-, medium- and long-term time horizons?

	From (years)	To (years)	Comment
Short-term	0	1	Terms are defined in line with strategic plan principles.
Medium-term	1	3	Terms are defined in line with strategic plan principles.
Long-term	3	7	Terms are defined in line with strategic plan principles.

C2.1b

(C2.1b) How does your organization define substantive financial or strategic impact on your business?

The main purpose of Karsan’s governance activities is to perform Risk Management and internal audit activities. Karsan risk management and internal audit activities are under the roof of all business divisions and the Board of Directors. Our risk management activities are carried out in a coordinated manner in all departments under the leadership of the Corporate Risk Management and Internal Audit Department. The Early Detection of Risk Committee, formed as a sub-committee of our Board of Directors, is responsible for Karsan’s risk management system and activities; The Audit Committee is responsible for the control and evaluation of internal audit systems and activities. Our Risk Management and Internal Audit Department performs the functional management of these processes and reports the results to the CEO and relevant Committees. In line with our risk management activities, while aiming to realize our strategies and targets, to define the risk correctly and to take action in this direction, and to minimize the risks; We use a dynamic risk management program structured with COSO Enterprise Risk Management systematic, ISO 31000 Standard and CMB Corporate Governance Principles. As Karsan, we recognize the importance of the concept of internal control, as risk management is at the core of corporate governance and internal audit. During our internal audit activities, which constitute one of the building blocks of our risk

management model; We carry out company activities in compliance with corporate values and commitments, policy, procedure, management standards and legal regulations. In this context, we aim to ensure that financial, managerial and business information is recorded in an accurate, timely and reliable manner, that the awareness and implementation level of management directives are monitored throughout the company, and that company assets are protected against abuses.

We implement internal audit activities for risk factors that are determined and targeted to be reduced as a result of risk assessment studies. We carry out our internal audit work, which we design in accordance with the principles of the COSO Model and IIA Standards, on a process and risk-based basis. The COSO internal control model we apply within the scope of risk management is the most internationally accepted, constantly developed and updated, and the most comprehensive risk management model. Like the COSO model, we evaluate the risks that arise in the internal audit studies we apply to protect the assets of our institution, with their financial dimensions, and ensure the follow-up of the actions we take (Ref. Sustainability Report 2022 p.22).

C2.2

(C2.2) Describe your process(es) for identifying, assessing and responding to climate-related risks and opportunities.

Value chain stage(s) covered

Direct operations
Upstream

Risk management process

A specific climate-related risk management process

Frequency of assessment

Annually

Time horizon(s) covered

Short-term
Medium-term
Long-term

Description of process

Karsan conducts a multidimensional process to identify climate related risk and opportunities accordance with the Environment pillar of World Class Manufacturing. Primary step for the identification process is Environmental Management Audit and Training (EMAT) System. During EMAT process, we conduct a risk and opportunity identification survey across the company by EMAT auditors who are randomly selected from managerial staff. During the EMAT process we identify both minor and major risks to be mitigated in short term and opportunities to be seize as quick wins. This process is conducted on a monthly basis mitigation success is controlled through smart KPIs and outcomes are reported to senior management bodies. Specialty risks which can not be

identified during EMAT process, are evaluated during the annual environmental risk assessment process which includes climate related risks and opportunities. According to Karsan's corporate risk management methodology, outcomes of this study are evaluated by senior management review process and appropriate mitigation actions defined. Necessary budgets are allocated during catchball meetings for each improvement project.

C2.2a

(C2.2a) Which risk types are considered in your organization's climate-related risk assessments?

	Relevance & inclusion	Please explain
Current regulation	Relevant, always included	Our company is all in comply with the current related regulations like European Green Deal. This topic closely monitored for the current and possible future regulations. Current regulations directly related with the company operations.
Emerging regulation	Relevant, always included	Emerging regulations directly related with the company operations.
Technology	Relevant, always included	Transition to low carbon technologies is a core focus for Karsan for this reason technology risks are always including in our risk assessment.
Legal	Not relevant, included	Legal risks are included in our corporate risk management system as a core pillar. For this reason we always including legal risk to our assessments however we did not defined any relevant legal risk within current risk evaluation.
Market	Relevant, always included	We are working in a vibrant, customer oriented and dynamic industry. For this reason, we always evaluate market risk in our business model.
Reputation	Relevant, always included	As a publicly traded company, reputation is directly connected to our market value thus we always relevant include reputation risks to our evaluations.
Acute physical	Relevant, always included	Extreme weather events may cause hazards and product losses. Thus it is a relevant risk for our operations and always include to our evaluations.
Chronic physical	Relevant, always included	Droughts may cause underground water shortages. Thus it is a relevant risk for our operations and always include to our evaluations.

C2.3

(C2.3) Have you identified any inherent climate-related risks with the potential to have a substantive financial or strategic impact on your business?

Yes

C2.3a

(C2.3a) Provide details of risks identified with the potential to have a substantive financial or strategic impact on your business.

Identifier

Risk 1

Where in the value chain does the risk driver occur?

Direct operations

Risk type & Primary climate-related risk driver

Current regulation

Mandates on and regulation of existing products and services

Primary potential financial impact

Increased direct costs

Company-specific description

Climate changed has a negative impact on energy and water resources which eventually affects energy and water prices. Increase in energy and water prices would increase production costs.

Time horizon

Medium-term

Likelihood

Likely

Magnitude of impact

Medium-low

Are you able to provide a potential financial impact figure?

Yes, a single figure estimate

Potential financial impact figure (currency)

27,000,000

Potential financial impact figure – minimum (currency)

Potential financial impact figure – maximum (currency)

Explanation of financial impact figure

Considering the indirect impact of any future restrictive legislation on energy purchases or GHG emissions, these are mainly related to a general increase in the cost of energy and water supply for Karsan. We assume that the direct impact of energy and water cost is approximately 5%. Risk and potential financial impact is expected to remain medium-low.

Cost of response to risk

75,000,000

Description of response and explanation of cost calculation

Karsan focused on energy loss savings in 2022. We achieved a total energy improvement of 6% by saving 836 MWh/year of energy. In addition, we reduced our energy consumption per unit of production by 9% from 17.4 GJ/unit in 2021 to 15.8 GJ/unit. We are purchasing all our energy needs (Sustainability Report pp.87).

Comment

In order to reduce energy cost we continue our improvement energy projects.

Identifier

Risk 2

Where in the value chain does the risk driver occur?

Upstream

Risk type & Primary climate-related risk driver

Emerging regulation

Mandates on and regulation of existing products and services

Primary potential financial impact

Decreased revenues due to reduced demand for products and services

Company-specific description

Since our business model is mostly on exports. We have to comply with ever developing EU and USA market legislation for our diesel segment products. Especially, EU Commission's Green Deal Framework requires us to take necessary steps for transition to lower carbon technologies both in terms of products and manufacturing processes for 2030 - 2050 time horizon. In this time frame we expect that new regulation will also arise which will be binding for us.

Time horizon

Long-term

Likelihood

Likely

Magnitude of impact

Medium-low

Are you able to provide a potential financial impact figure?

Yes, a single figure estimate

Potential financial impact figure (currency)

2,994,383,000

Potential financial impact figure – minimum (currency)

Potential financial impact figure – maximum (currency)

Explanation of financial impact figure

We calculated the cost of not being able to sell a vehicle for one year.

Cost of response to risk

2,500,000

Description of response and explanation of cost calculation

Financial impact figure comes from the required investment for engine and related component development; carbon taxes costs due to emissions from production above the limitations.

Comment

Identifier

Risk 3

Where in the value chain does the risk driver occur?

Direct operations

Risk type & Primary climate-related risk driver

Chronic physical

Changing precipitation patterns and types (rain, hail, snow/ice)

Primary potential financial impact

Increased direct costs

Company-specific description

We use underground water as resource during our production time. Therefore we have to consider the impact of climate change on water resources. We are working on recycle and reuse alternatives to avoid running out of water resources.

Time horizon

Long-term

Likelihood

Likely

Magnitude of impact

Medium-high

Are you able to provide a potential financial impact figure?

Yes, a single figure estimate

Potential financial impact figure (currency)

1,989,000

Potential financial impact figure – minimum (currency)

Potential financial impact figure – maximum (currency)

Explanation of financial impact figure

There is a direct relationship between not being able to reach water resources and not being able to produce for long term. So risk and potential financial impact is expected to remain medium-high.

Cost of response to risk

2,000,000

Description of response and explanation of cost calculation

The cost of a recovery plant to reuse treated water and production losses.

Comment

Identifier

Risk 4

Where in the value chain does the risk driver occur?

Upstream

Risk type & Primary climate-related risk driver

Technology

Transitioning to lower emissions technology

Primary potential financial impact

Decreased revenues due to reduced demand for products and services

Company-specific description

Currently, we use electricity and natural gas for energy during our production activities. We aim to meet some of this energy(nearly 50%) with renewable energy and reduce our carbon emissions.

Time horizon

Long-term

Likelihood

More likely than not

Magnitude of impact

Medium

Are you able to provide a potential financial impact figure?

Yes, a single figure estimate

Potential financial impact figure (currency)

2,994,383,000

Potential financial impact figure – minimum (currency)

Potential financial impact figure – maximum (currency)

Explanation of financial impact figure

We calculated the cost of not being able to sell a vehicle for one year.

Cost of response to risk

75,000,000

Description of response and explanation of cost calculation

We calculated the cost of renewable energy technologies.

Comment

Identifier

Risk 5

Where in the value chain does the risk driver occur?

Direct operations

Risk type & Primary climate-related risk driver

Market

Changing customer behavior

Primary potential financial impact

Decreased revenues due to reduced demand for products and services

Company-specific description

Market expectations are directed towards low-carbon products. Therefore, our electric vehicle investments have increased.

Time horizon

Medium-term

Likelihood

Likely

Magnitude of impact

Medium-high

Are you able to provide a potential financial impact figure?

Yes, a single figure estimate

Potential financial impact figure (currency)

2,994,383,000

Potential financial impact figure – minimum (currency)

Potential financial impact figure – maximum (currency)

Explanation of financial impact figure

We calculated the cost of not being able to sell a vehicle for one year.

Cost of response to risk

150,000,000

Description of response and explanation of cost calculation

The investment cost of producing a 50% electric vehicle

Comment

Identifier

Risk 6

Where in the value chain does the risk driver occur?

Direct operations

Risk type & Primary climate-related risk driver

Acute physical

Flood (coastal, fluvial, pluvial, groundwater)

Primary potential financial impact

Increased indirect (operating) costs

Company-specific description

Extreme weather events prevent us from producing some days per year. Also it will damage our production lines and our technologies.

Time horizon

Long-term

Likelihood

Likely

Magnitude of impact

Medium

Are you able to provide a potential financial impact figure?

Yes, a single figure estimate

Potential financial impact figure (currency)

1,000,000

Potential financial impact figure – minimum (currency)

Potential financial impact figure – maximum (currency)

Explanation of financial impact figure

Loss of production and losses due to damage to our production lines

Cost of response to risk

100,000

Description of response and explanation of cost calculation

Insurance and policy costs.

Risk 7

Where in the value chain does the risk driver occur?

Direct operations

Risk type & Primary climate-related risk driver

Emerging regulation

Mandates on and regulation of existing products and services

Primary potential financial impact

Increased direct costs

Company-specific description

Since our business model is mostly on exports. We have to comply with ever developing EU and USA market legislation for our diesel segment products. Especially, Adapting to

circular economy conditions will bring us new risks for the EU and the USA. In this time frame we expect that new regulation will also arise which will be binding for us.

Time horizon

Medium-term

Likelihood

Very likely

Magnitude of impact

Medium-high

Are you able to provide a potential financial impact figure?

No, we do not have this figure

Potential financial impact figure (currency)

Potential financial impact figure – minimum (currency)

Potential financial impact figure – maximum (currency)

Explanation of financial impact figure

We calculated the cost of not being able to sell a vehicle for one year.

Cost of response to risk

2,994,383,000

Description of response and explanation of cost calculation

Financial impact figure comes from the required investment for engine and related component development; carbon taxes costs due to emissions from production above the limitations.

Comment

Identifier

Risk 8

Where in the value chain does the risk driver occur?

Upstream

Risk type & Primary climate-related risk driver

Chronic physical

Changing temperature (air, freshwater, marine water)

Primary potential financial impact

Decreased asset value or asset useful life leading to write-offs, asset impairment or early retirement of existing assets

Company-specific description

This may be around 7°C higher compared to average summer temperatures now, with the potential to reach extreme temperatures as high as over 40°C with increasing frequency based on today's values. We expect an increase in the number of early retirement and early incapacity reports due to the increase in temperature in the world, where the global average temperatures are constantly breaking records. A decrease in the number and quality of production due to the loss of qualified personnel.

Time horizon

Medium-term

Likelihood

Very likely

Magnitude of impact

Medium-high

Are you able to provide a potential financial impact figure?

No, we do not have this figure

Potential financial impact figure (currency)

Potential financial impact figure – minimum (currency)

Potential financial impact figure – maximum (currency)

Explanation of financial impact figure

The financial impact figure comes from the required investment for engine and related component development; carbon taxes costs due to emissions from production above the limitations.

Cost of response to risk

2,400,000

Description of response and explanation of cost calculation

A year cost of 10 people has been calculated

Risk type & Primary climate-related risk driver

Acute physical

Flood (coastal, fluvial, pluvial, groundwater)

Primary potential financial impact

Increased indirect (operating) costs

Company-specific description

The flow in the watercourses could be 50% more than now at its peak, and 80% less than now at its lowest. So, there will be delays in product delivery.

Time horizon

Long-term

Likelihood

Likely

Magnitude of impact

Medium

Are you able to provide a potential financial impact figure?

Yes, an estimated range

Potential financial impact figure (currency)

Potential financial impact figure – minimum (currency)

1,000,000

Potential financial impact figure – maximum (currency)

10,000,000

Explanation of financial impact figure

Forecast of late delivery of 1 vehicle depending on raw material supply (for minimum).

Forecast of late delivery of 1 vehicle depending on raw material supply (for maximum).

Cost of response to risk

2,000,000

Description of response and explanation of cost calculation

The cost of a recovery plant to reuse treated water and production losses. Checking existing environmental risk assessment to make sure low river flow used in assessment remains valid . Reviewing and improving discharge parameters if the additional impact is predicated upon a receiving watercourse.

Comment

Identifier

Risk 10

Where in the value chain does the risk driver occur?

Direct operations

Risk type & Primary climate-related risk driver

Reputation

Increased stakeholder concern or negative stakeholder feedback

Primary potential financial impact

Increased indirect (operating) costs

Company-specific description

Storms could see a change in frequency and intensity. The unique combination of increased wind speeds, increased rainfall, and lightning during these events provides the potential for more extreme storm impacts. So, there will be delays in product delivery.

Time horizon

Long-term

Likelihood

Likely

Magnitude of impact

Where in the value chain does the opportunity occur?

Upstream

Opportunity type

Products and services

Primary climate-related opportunity driver

Development of new products or services through R&D and innovation

Primary potential financial impact

Increased revenues through access to new and emerging markets

Company-specific description

The fact that electric vehicles have a much more compact structure compared to hydrocarbon fueled vehicles allows many vehicles to be produced on the same platform thanks to their modular platform structures. This creates a huge advantage in the automotive industry in terms of diversity, quality and production efficiency which helps to reduce GHG emissions.

Time horizon

C3. Business Strategy

C3.1

(C3.1) Does your organization’s strategy include a climate transition plan that aligns with a 1.5°C world?

Row 1

Climate transition plan

No, but our strategy has been influenced by climate-related risks and opportunities, and we are developing a climate transition plan within two years

Explain why your organization does not have a climate transition plan that aligns with a 1.5°C world and any plans to develop one in the future

For this, we have participated in UN Global Compact Climate Ambition Accelerator, which is carried out especially for UN Global Compact members. In this context, we are preparing ourselves to be included in SBTi within 5 years. And we have 4 Corporate Sustainable Specialists with accredited certificates.

C3.2

(C3.2) Does your organization use climate-related scenario analysis to inform its strategy?

Use of climate-related scenario analysis to inform strategy	
Row 1	Yes, qualitative and quantitative

C3.2a

(C3.2a) Provide details of your organization’s use of climate-related scenario analysis.

Climate-related scenario	Scenario analysis coverage	Temperature alignment of scenario	Parameters, assumptions, analytical choices
	Other, please specify Nationally determined contributions (NDCs)		Quantitative parameters: - Sales rate of our sustainable product - Carbon emissions consumption - Carbon emissions per vehicle - Recycled material rate -Recyclable rate for our electricity product -Energy consumption -Water consumption Qualitative parameters; - Legal compliance - Training hours for sustainability

C3.2b

(C3.2b) Provide details of the focal questions your organization seeks to address by using climate-related scenario analysis, and summarize the results with respect to these questions.

Row 1

Focal questions

- Which KPIs does our company follow about climate change?
- Do we have a carbon neutral target?
- Do our activities take into account all processes from cradle to grave?

Results of the climate-related scenario analysis with respect to the focal questions

In our strategic planning processes, we employ scenarios based on principles of NDC declared by Republic of Turkey, which also refers to 2 Degrees Scenarios to be implemented between 2021- 2030 time frame. Within this NDC several action plans declared which have direct and indirect relations to our business strategies. For instance, energy pillar of NGC plans for carbon emission reductions refers to an increase in renewable energy production as well as in micro-generation, co-generation and on-site production practices which we also consider in our strategies to reduce emissions and energy consumption and operational costs. In the industry pillar, plans focus mainly on industry wise energy intensity reduction and incentivizing efficiency project.

We already invest in efficiency projects which aim to reduce energy intensity of our production. We include these projects in our strategic plans not only for their emission reduction outcomes but also for their significant impacts on our cost structure and process quality towards a leaner structure. Transport pillar of the NDC generates the most significant support to our business strategy. In this pillar, implementation of more sustainable transportation approaches in urban areas and promotion of alternative fuel and clean vehicles are the amongst the core actions. Since 2018 we increase our effort to develop and produce electric and autonomous vehicles. Our business strategy focuses on success to highlight our corporate identity as a green mobility provider by increasing proportion of electric and alternative fuel vehicles in our total sales. In the other hand, consistency of our focus on green transportation and business model with green financial incentives, sustainable investment initiatives and governmental supports which aims low carbon economy transition, create significant financial opportunities for implementing our business strategy.

C3.3

(C3.3) Describe where and how climate-related risks and opportunities have influenced your strategy.

	Have climate-related risks and opportunities influenced your strategy in this area?	Description of influence
Products and services	Yes	As Karsan, we aim to be a pioneer in the world in electric and autonomous public transportation models and to develop customer-oriented solutions and services by

		<p>developing collaborations within the mobility ecosystem. In this context, we started to develop electric and autonomous vehicles, which help to reduce GHG emissions, with innovative features, and to expand our activities in the field of mobility services, with the work of our strategic planning and business development, marketing and R&D units. Our efforts for green mobility also correspond with NDC declared by Republic of Turkey and Green Deal scheme declared by European Union.</p> <p>In the short term, our goal is to expand the electric vehicle product range from 6m to 24m, to diversify our public transportation solutions and to offer customers the full product range they may need. In the medium and long term, our aim is to equip our entire product range with autonomous technologies and integrate it with service segments, making Karsan a company that provides sustainable mobility solutions and services as well as being a vehicle manufacturer.</p>
Supply chain and/or value chain	Evaluation in progress	<p>When choosing our direct product suppliers, we audit our supplier candidates whether they meet the compliance with environmental aspects depending on ISO 14001. According to our WCM strategy, in the mid-term, we aim to implement Green Logistic Principles and internal carbon pricing principles which help to reduce GHG emissions, to our supplier. We have carried out some Milk-Run and Circular Economy applications. And we wrote 2 academic articles indexed by SCI-Expanded journals.</p> <p>In addition, with the 'Green Supply and Procurement' Project, which is planning to start in 2023, we aim to prioritize sustainability criteria in our supply and procurement processes as of 2024.</p> <p>Moreover, we plan to calculate the rate of use of recycled materials in our electric vehicles in 2023. We foresee the use of 20% or more recycled materials in our electric vehicles in 5 years.</p> <p>We believe this is a good way to develop closer relations with our suppliers and integrate them with the green procurement project.</p> <p>The project that we anticipate to start in 2023 will be a product-based carbon footprint study of electric, autonomous and hydrogen vehicles, and we are cooperating with TUBITAK within the scope of this project.</p>
Investment in R&D	Yes	The capacity to produce vehicles with low climate change impacts, especially electric vehicles, represents the point

		<p>where risk turns into opportunity in our sector. For this reason, the transformation of our vehicle portfolio also constitutes an important part of our R&D and product strategy. However, as an industrial company, we cannot ignore our production operations in terms of their impact on climate change.</p> <p>In line with our understanding of sustainability, we act with the logic of value chain in our R&D and innovation studies, as well as in our other fields of activity, and we implement innovative practices, especially digitization in production processes, in addition to product and service development. Our R&D work is carried out in coordination with the relevant business units by our R&D Center, which was registered by the Ministry of Industry and Trade in 2019. New technology trends, customer demands, innovations arising from existing projects, scientific publications are the main sources that feed our R&D projects. In this context, the biggest focus of our R&D Center, which works in various fields with 58 research personnel, is to develop mobility service models based on sustainable, environmentally friendly, electric and autonomous vehicles and disruptive technologies.</p> <p>In the last five years, we have spent over 75 million TL on R&D. As a result of these efforts, 13 of our patent applications were accepted and we made 5 new patent applications. At the end of our research, we developed 5 new products and we generated approximately 355 million TL revenue from these new products.</p> <p>The most important focus of our R&D work is to produce environmentally friendly vehicles. While one part of this focus is to produce electric vehicles, the other part is to reduce the emission values of existing diesel fueled vehicles. During the reporting period, we determined new technical specifications and conducted research on the necessary parameters. In line with the engineering activities we carried out as a result of our research, our suppliers also implemented software updates. After testing the selected engine applications on prototype vehicles, we preformed vehicle implementations.</p>
Operations	Yes	<p>The fact that electric vehicles have a much more compact structure compared to hydrocarbon fueled vehicles allows many vehicles to be produced on the same platform thanks to their modular platform structures. This creates a huge advantage in the automotive industry in terms of diversity, quality and production efficiency which helps to reduce GHG emissions.</p>

		<p>The effective management of environmental impacts arising from our activities is one of our main sustainability priorities. Environmental impact management is one of the basic elements of the WCM methodology that we have adopted as the main working model. Therefore, we strive to control and reduce environmental impact at every point of our work. Environmental impacts in our production activities include climate change and greenhouse gases, various air gases, energy management, water consumption, material consumption, waste management and recycling. On the other hand, environmental impacts, primarily fuel consumption and greenhouse gas emissions, occur during the use of the vehicles we produce.</p> <p>The capacity to produce vehicles with low climate change impacts, especially electric vehicles, represents the point where risk turns into opportunity in our sector. For this reason, the transformation of our vehicle portfolio also constitutes an important part of our R&D and product strategy. However, as an industrial company, we cannot ignore our production operations in terms of their impact on climate change. At this point, energy efficiency and greenhouse gas emission management are areas that we carefully manage.</p>
--	--	---

C3.4

(C3.4) Describe where and how climate-related risks and opportunities have influenced your financial planning.

	Financial planning elements that have been influenced	Description of influence
Row 1	Revenues Direct costs Indirect costs Capital expenditures Access to capital	<p>As a green mobility provider through are electric vehicles transition of the transport market towards low-carbon vehicles, especially by EU Green Deal action plans for European Market, offers significant opportunities in terms of sales revenue generation.</p> <p>While a transition to electric vehicle production creates additional direct costs mainly because of battery and electronic component costs, efforts to reduce GHG emissions arising from the production process have a positive impact on reducing indirect costs arising from energy consumption.</p> <p>R&D and transition projects require additional capital investments to apply our carbon strategy, green financial products such as green bonds, initiatives such as responsible investment principles, specialty funds such as Green Climate Fund provides significant opportunities to access favorable financial capital.</p>

C3.5

(C3.5) In your organization’s financial accounting, do you identify spending/revenue that is aligned with your organization’s climate transition?

	Identification of spending/revenue that is aligned with your organization’s climate transition
Row 1	No, but we plan to in the next two years

C4. Targets and performance

C4.1

(C4.1) Did you have an emissions target that was active in the reporting year?

Absolute target

Intensity target

C4.1a

Target status in reporting year

Achieved

Is this target part of an emissions target?

Increase in percentage of electric vehicles in total production results in decrease of Scope 3 emissions because of reduced emissions of sold products.

Is this target part of an overarching initiative?

No, it's not part of an overarching initiative

Please explain target coverage and identify any exclusions

Plan for achieving target, and progress made to the end of the reporting year

List the actions which contributed most to achieving this target

We launched our first electric vehicle in late 2018. We aim to increase our percentage of electric vehicle production to the level 34% by the year 2022. Currently as of 2021 year end we achieved 24%.

C4.3

(C4.3) Did you have emissions reduction initiatives that were active within the reporting year? Note that this can include those in the planning and/or implementation phases.

Yes

C4.3a

(C4.3a) Identify the total number of initiatives at each stage of development, and for those in the implementation stages, the estimated CO2e savings.

	Number of initiatives	Total estimated annual CO2e savings in metric tonnes CO2e (only for rows marked *)
Under investigation	3	273
To be implemented*		
Implementation commenced*		
Implemented*	9	187
Not to be implemented

Investment required (unit currency – as specified in C0.4)

639,000

Payback period

<1 year

Estimated lifetime of the initiative

11-15 years

Comment

We define our problem that we used 5W1H tools, and that shows the compressor unit produces waste heat 181 Kwh energy independent of person. Phenomena is Losses due to not using recoverable energy which is Type 4 losses (losses due to non-using recoverable energy) . We can realised it from external measurement that shows us there are still produces And when we look root cause, you can see that there is a lack of technology.

Initiative category & Initiative type

Payback period

<1 year

Estimated lifetime of the initiative

11-15 years

Comment

We define the problem that we used 5W1H tools, and that shows us time of the rest in welding area consumes 40 kWh energy independent of person for break time. Phenomena is transformation loss. We can realised it from SCADA data that shows us there is still consumption for break time. And when we look root cause you can see that lack of technology.

After root cause analyses we added a sensor with a field scanner and We have made it automatically turn off during break times. In the Check phase, we have controlled the result in which we gained 36.000 kWh/year energy use improvement and in total 198 kTL earnings.

Comment

With the Route Mapping/Green Procurement project, our suppliers travel 105.050 km less per year.

C4.3c

(C4.3c) What methods do you use to drive investment in emissions reduction activities?

Method	Comment
Compliance with regulatory requirements/standards	In line with our corporate principles compliance with all applicable law and regulation is a minimum working standards for Karsan. For this reason compliance with emission reduction requiring regulatory activities is a core motivation for investments.
Dedicated budget for energy efficiency	Energy consumption is one of the main cost items in our operations. Energy efficiency projects not only reduce carbon emissions but also support financial performance. For this reason we allocate dedicated budget annually for energy efficiency projects.
Dedicated budget for low-carbon product R&D	Producing low carbon product such as electric or alternatives fuel vehicles is the core focus of our business strategy. For this reason we allocate a substantial percentage of R&D budget for low carbon products.
Dedicated budget for other emissions reduction activities	We allocate a dedicated budget to reduce indirect emissions arising from water consumption, wastewater treatment and solid wastes.
Employee engagement	We engage with our employees to encourage them to generate kaizen projects which result in emission reduction. For this reason we invest in activities to increase employee engagement level such as training programs.
Internal incentives/recognition programs	To incentivize employees' efforts towards GHG emission reductions and suggestions for climate friendly business practices we conduct recognition and reward programs.

C4.5

(C4.5) Do you classify any of your existing goods and/or services as low-carbon products?

Yes

C4.5a

(C4.5a) Provide details of your products and/or services that you classify as low-carbon products.

Methodology used to calculate avoided emissions

Life cycle stage(s) covered for the low-carbon product(s) or services(s)

Functional unit used

Reference product/service or baseline scenario used

Life cycle stage(s) covered for the reference product/service or baseline scenario

Estimated avoided emissions (metric tons CO₂e per functional unit) compared to reference product/service or baseline scenario

Explain your calculation of avoided emissions, including any assumptions

Revenue generated from low-carbon product(s) or service(s) as % of total revenue in the reporting year

1

C5. Emissions methodology

C5.1

(C5.1) Is this your first year of reporting emissions data to CDP?

No

C5.1a

(C5.1a) Has your organization undergone any structural changes in the reporting year, or are any previous structural changes being accounted for in this disclosure of emissions data?

Row 1

Has there been a structural change?

No

C5.1b

(C5.1b) Has your emissions accounting methodology, boundary, and/or reporting year definition changed in the reporting year?

Change(s) in methodology, boundary, and/or reporting year definition?	
Row 1	No

C5.2

(C5.2) Provide your base year and base year emissions.

Change in output				
Change in methodology				
Change in boundary				
Change in physical operating conditions				
Unidentified				
Other				

C7.9b

(C7.9b) Are your emissions performance calculations in C7.9 and C7.9a based on a location-based Scope 2 emissions figure or a market-based Scope 2 emissions figure?

Location-based

C8. Energy

C8.1

(C8.1) What percentage of your total operational spend in the reporting year was on energy?

More than 5% but less than or equal to 10%

C8.2

(C8.2) Select which energy-related activities your organization has undertaken.

	Indicate whether your organization undertook this energy-related activity in the reporting year
Consumption of fuel (excluding feedstocks)	Yes
Consumption of purchased or acquired electricity	Yes
Consumption of purchased or acquired heat	No
Consumption of purchased or acquired steam	No
Consumption of purchased or acquired cooling	No
Generation of electricity, heat, steam, or cooling	No

C8.2a

(C8.2a) Report your organization's energy consumption totals (excluding feedstocks) in MWh.

	Heating value	MWh from renewable sources	MWh from non-renewable sources	Total (renewable and non-renewable) MWh

Consumption of fuel (excluding feedstock)	LHV (lower heating value)	546	13,633	14,179
Consumption of purchased or acquired electricity		0	12,351	12,351
Total energy consumption				

C8.2b

(C8.2b) Select the applications of your organization's consumption of fuel.

	Indicate whether your organization undertakes this fuel application
Consumption of fuel for the generation of electricity	No
Consumption of fuel for the generation of heat	Yes
Consumption of fuel for the generation of steam	No
Consumption of fuel for the generation of cooling	No
Consumption of fuel for co-generation or tri-generation	No

C8.2c

(C8.2c) State how much fuel in MWh your organization has consumed (excluding feedstocks) by fuel type.

C10.2

(C10.2) Do you verify any climate-related information reported in your CDP disclosure other than the emissions figures reported in C6.1, C6.3, and C6.5?

No, we do not verify any other climate-related information reported in our CDP disclosure

C11. Carbon pricing

C11.1

(C11.1) Are any of your operations or activities regulated by a carbon pricing system (i.e. ETS, Cap & Trade or Carbon Tax)?

No, and we do not anticipate being regulated in the next three years

C11.2

(C11.2) Has your organization canceled any project-based carbon credits within the reporting year?

No

C11.3

(C11.3) Does your organization use an internal price on carbon?

Yes

C11.3a

(C11.3a) Provide details of how your organization uses an internal price on carbon.

Type of internal carbon price

Shadow price

How the price is determined

Social cost of carbon

Benchmarking against peers

Objective(s) for implementing this internal carbon price

Change internal behavior

Drive energy efficiency

Drive low-carbon investment

Identify and seize low-carbon opportunities

Yes, for some decision-making processes, please specify

Energy efficiency project and purchasing energy efficiency equipment

Explain how this internal carbon price has contributed to the implementation of your organization's climate commitments and/or climate transition plan

In the energy feasibility report, we had two reports prepared, one including internal carbon and one without carbon pricing.

C12. Engagement

C12.1

(C12.1) Do you engage with your value chain on climate-related issues?

Yes, our suppliers

Yes, our customers/clients

Yes, other partners in the value chain

C12.1a

(C12.1a) Provide details of your climate-related supplier engagement strategy.

Type of engagement

Information collection (understanding supplier behavior)

Details of engagement

Collect other climate related information at least annually from suppliers

% of suppliers by number

57

% total procurement spend (direct and indirect)

50

% of supplier-related Scope 3 emissions as reported in C6.5

2

Rationale for the coverage of your engagement

As Karsan, we support the transition towards a low carbon mobility environment through electric, autonomous and hydrogen vehicles. For this reason we develop and produce EV vehicles.

Developing a cutting edge technology in automotive industry is only possible if we engaged deeply with our suppliers. We work together to innovate new technologies and produced high value added vehicles with our suppliers in order to drive change towards a climate friendly mobility service industry.

Karsan checks the environmental and social parameters of its suppliers on an annual basis with a dedicated risk management program called M-Files. In addition, with the 'Green Supply and Procurement' Project, which is planning to start in 2023, we aim to

prioritize sustainability criteria in our supply and procurement processes as of 2024. Moreover, we plan to calculate the rate of use of recycled materials in our electric vehicles in 2023. We foresee the use of 20% or more recycled materials in our electric vehicles in 5 years. We believe this is a good way to develop closer relations with our suppliers and integrate them with the green procurement project.

Impact of engagement, including measures of success

As we are producing electric vehicles, we use electric batteries of German Automotive Brand - BMW. Jest Electric and Atak Electric are equipped with same batteries and electric motors with BMW i3 and i8 which helps our customers and our brand great advantages while increasing the threshold between our competitors. In the year 2022, we began to produce Autonomous Atak Electric with the contribution of Adastec technology. Autonomous Atak Electric, Europe's first public transport vehicle with 100% electric and Level- 4 autonomous features, has completed the final stage on the assembly line in the year 2021. Numerous suppliers have contributed our electric autonomous vehicle development studies by producing native design parts and components to be implemented on our vehicles. We sold our first electric autonomous vehicle in 2020.

In 2022 we produced 304 electric vehicles and sold. We launched a new R&D study together with our suppliers for developed 3 new electric bus models and sold 21. Also, we produced a new car with Hydrogen Fuel Cell technology. And we got Sustainability Bus Award.

Comment

C12.1b

(C12.1b) Give details of your climate-related engagement strategy with your customers.

Type of engagement & Details of engagement

Collaboration & innovation

Collaborate with customers in creation and review of your climate transition plan

% of customers by number

57

% of customer - related Scope 3 emissions as reported in C6.5

1

Please explain the rationale for selecting this group of customers and scope of engagement

Most of our production depends on tender is that we won. Clients that open tenders for purchase, also define vehicle requirement. Therefore we engage with prospect clients, innovate for them, collaborate during the process in order to respond fully to their

requirements. 50% of our customers in 2021 required electric vehicles for which we collaborate with them.

Karsan checks the environmental and social parameters of its suppliers on an annual basis with a dedicated risk management program called M-Files. In addition, with the 'Green Supply and Procurement' Project, which is planning to start in 2023, we aim to prioritize sustainability criteria in our supply and procurement processes as of 2024. Moreover, we plan to calculate the rate of use of recycled materials in our electric vehicles in 2023. We foresee the use of 20% or more recycled materials in our electric vehicles in 5 years. We believe this is a good way to develop closer relations with our suppliers and integrate them with the green procurement project.

The project that we anticipate to start in 2023 will be a product-based carbon footprint study of electric, autonomous and hydrogen vehicles, and we are cooperating with TUBITAK within the scope of this project. In this project, we aim to focus on carbon emissions starting from the procurement stage of the product to the manufacturing stage, the product stage and the end-of-life product stage. We will carry out this project by working with our suppliers, especially in the raw material and procurement phase. The project will be completed in 2024.

Impact of engagement, including measures of success

We produced 145 electric vehicles and sold in 2021. We sold our first electric autonomous vehicle in 2020. We launched a new R&D study together with our suppliers for developed 3 new electric bus models and sold 11. Also, we sold 304 electric vehicles in 2022.

C12.1d

(C12.1d) Give details of your climate-related engagement strategy with other partners in the value chain.

We work for transforming our business model to support low carbon economy, this includes both developing electric or alternative fuel vehicles such as fuel cells and a climate-friendly production process which requires extensive investment. In order to receive required investment from financial institutions we engage with them frequently. Especially financial institutions which adopt green finance principles are in our scope. We engage with them to collaborate on responding to their product or business model requirements. Green finance institutions have a great know-how on low-carbon business models which we benefit from, to transform our practices.

Karsan checks the environmental and social parameters of its suppliers on an annual basis with a dedicated risk management program called M-Files. In addition, with the 'Green Supply and Procurement' Project, which is planning to start in 2023, we aim to prioritize sustainability criteria in our supply and procurement processes as of 2024.

Moreover, we plan to calculate the rate of use of recycled materials in our electric vehicles in 2023. We foresee the use of 20% or more recycled materials in our electric vehicles in 5 years. We believe this is a good way to develop closer relations with our suppliers and integrate them with the green procurement project.

The project that we anticipate to start in 2023 will be a product-based carbon footprint study of electric, autonomous and hydrogen vehicles, and we are cooperating with TUBITAK within the

scope of this project. In this project, we aim to focus on carbon emissions starting from the procurement stage of the product to the manufacturing stage, the product stage and the end-of-life product stage. We will carry out this project by working with our suppliers, especially in the raw material and procurement phase. The project will be completed in 2024.

C12.2

(C12.2) Do your suppliers have to meet climate-related requirements as part of your organization's purchasing process?

No, but we plan to introduce climate-related requirements within the next two years

C12.3

(C12.3) Does your organization engage in activities that could either directly or indirectly influence policy, law, or regulation that may impact the climate?

Row 1

External engagement activities that could directly or indirectly influence policy, law, or regulation that may impact the climate

Yes, our membership of/engagement with trade associations could influence policy, law, or regulation that may impact the climate

Does your organization have a public commitment or position statement to conduct your engagement activities in line with the goals of the Paris Agreement?

Yes

Attach commitment or position statement(s)

 UN Global Compact İmza.pdf

Describe the process(es) your organization has in place to ensure that your external engagement activities are consistent with your climate commitments and/or climate transition plan

C12.3b

(C12.3b) Provide details of the trade associations your organization is a member of, or engages with, which are likely to take a position on any policy, law or regulation that may impact the climate.

Trade association

Other, please specify

Automotive Manufacturers Association

Is your organization's position on climate change policy consistent with theirs?

Consistent

Has your organization attempted to influence their position in the reporting year?

Yes, we publicly promoted their current position

Describe how your organization's position is consistent with or differs from the trade association's position, and any actions taken to influence their position

We engage with Turkish Automotive Manufacturers Association (OSD), Turkish partner of ACEA (The European Automobile Manufacturers Association) represents the interests of Turkish automotive manufacturers. Karsan CEO acts as OSD's Board member, various Karsan managers work in working groups of OSD, such as environment working group, energy efficiency working group and sustainability working group. In these working groups we develop public policy position of the OSD, regarding these climate related aspects which has a significant impact on both national legislation processes and European industry policies. Also In 2021, Turkey Automotive Manufacturers Sustainability Report was prepared as OSD. At the same time, the LCA report on automotive production in Turkey was prepared. As Karsan, we took an active role in the writing process of these reports. We have a favorable stance in line with OSD's public policy position since we actively engage in the development process. OSD's position on climate related issues reflects the combined view of manufacturers. OSD anticipates the leading role of automotive manufacturer for the transition to a low-carbon mobility service. For that end, OSD members work on both green vehicle development and reducing environmental and climate impacts of production such as energy and water efficiency, waste, and effluent management. During 2022, emerging emphasis made on preparing the industry to comply with EU Green Deal actions. Furthermore, OSD works on an industry wide sustainability analysis, results of which will be published with an industry-wide sustainability report.

Funding figure your organization provided to this trade association in the reporting year (currency as selected in C0.4)

Describe the aim of your organization's funding

Have you evaluated whether your organization's engagement with this trade association is aligned with the goals of the Paris Agreement?

Yes, we have evaluated, and it is aligned

Trade association

Other, please specify
UN Global Compact

Is your organization's position on climate change policy consistent with theirs?

Consistent

Has your organization attempted to influence their position in the reporting year?

Yes, we publicly promoted their current position

Describe how your organization's position is consistent with or differs from the trade association's position, and any actions taken to influence their position

We are committed to comply with environmental conditions in our activities with the membership of the UN Global Compact. In order to prepare ourselves for SBTi projects by being included in UN Compact Climate Ambition Accelerator, we continue to receive training support from UN Global Compact. In this context, we are planning to take part in climate projects regularly with the UN Global Compact.

Funding figure your organization provided to this trade association in the reporting year (currency as selected in C0.4)

Describe the aim of your organization's funding

Have you evaluated whether your organization's engagement with this trade association is aligned with the goals of the Paris Agreement?

Yes, we have evaluated, and it is aligned

Trade association

Other, please specify
Fortune 500 Sustainability Projects

Is your organization's position on climate change policy consistent with theirs?

Mixed

Has your organization attempted to influence their position in the reporting year?

Yes, we terminated our membership in the reporting year

Describe how your organization's position is consistent with or differs from the trade association's position, and any actions taken to influence their position

A sustainability report study, which included Fortune 500 companies for 2022, was carried out. In this context, a report was prepared that includes our current position by getting a B score and the projects required to reach the A score level.

Funding figure your organization provided to this trade association in the reporting year (currency as selected in C0.4)

Describe the aim of your organization's funding

Have you evaluated whether your organization's engagement with this trade association is aligned with the goals of the Paris Agreement?

Yes, we have evaluated, and it is aligned
